1 Safety Precautions

- The design of this product contains special hardware and may circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
- Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer or responsibility for personal injury or property damage resulting therefrom.
- 3. Many electrical and mechanical parts in the product have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by (Δ) on the schematic diagram and Parts List in Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the Parts List in Service Manual may create shock, fire, or other hazards.
- 4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard.

When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.

5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage
 current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path
 to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5 mA AC (r.m.s.).
- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10 W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.).

This corresponds to 0.5 mA AC (r.m.s.).

Warning

- 1. This equipment has been designed and manufactured to meet international safety standards.
- 2. It is the legal responsibility of the repairer to ensure that these safety standards are mainteined.
- 3. Repairs must be made in accordance with the relevant safety standards.
- 4. It is essential that safety critical components are replaced by approved parts.
- 5. If mains voltage selector is provided, check setting for local voltage.

Specifications

: Stereo cassette deck : 4-track, 2-channel Track system

Tape speed : 1-7/8 inch/sec (4.8 cm/sec)

: (-20 dB recording) Frequency response

Metal tape; 15-19,000 Hz 20-17,000 Hz (±3 dB)

Chrome tape;

15-18,000 Hz 20-16,000 Hz (±3 dB)

Normal tape; 15-18,000 Hz

20-16,000 Hz (±3 dB) S/N ratio : 58 dB (S = 1 kHz, K3 = 3%)

> N = A-weighted, Metal tape) The S/N is improved by about 15 dB at 500 Hz and by max. 20 dB at 1 kHz ~ 10 kHz with Dolby C NR on and improved by 5 dB at 1 kHz and by 10 dB at above 5 kHz with Dolby B NR

on.

Improvement of MOL : 4 dB at 10 kHz with Dolby C NR

Wow and flutter

Channel separation : 40 dB (1 kHz) Crosstalk : 60 dB (1 kHz)

Harmonic distortion

(metal tape, 1 kHz 0 VU) Heads : SA (Sen-Alloy) recording/

: 0.05% (WRMS)

: K3; 0.5% THD; 1.0%

playback head, 2 Gap-Ferrite

erasure head; Combination head

Motors : Electronic governed DC motor for

capstan \times 1

DC motor for reel × 1

DC motor for mechanism drive × 1

Fast forward/Rewind

: Approx. 95 sec. with C-60 time

cassette

Input terminals

: Min. input level; 80 mV LINE IN (×1 circuit) Input impedance; 50 k Ω CD DIRECT : Min. input level; 80 mV Input impedance; 50 k Ω (×1 circuit)

Output terminals

LINE OUT : Outpuit level; 300 mV (×1 circuit) Output impedance; 5 kΩ PHONES × 1 : Output level; 0~1 mW/8 Ω

Matching impedance

 $8 \Omega - 1 k\Omega$

: COMPU LINK-1/SYNCHRO \times 2 Other terminals

Power requirement

TD-R611A/B/E/G : AC240/220/120 V, 50/60 Hz

TD-R611C/J : AC 120 V, 60 Hz

: 15 W Power consumpiton

Dimensions

 $(W \times H \times D)$: 435 imes 132 imes 336 mm

 $(17-3/16'' \times 5-1/4'' \times 13-1/4'')$

Weight : 6.8 kg (15.0 lbs)

Accessories : Pin plug cord 2 Remote cable 1

Bottom view

Fig. 3-1

4 Location of Control

Fig. 4-1

• REVERSE MODE switch

Select a single side or full record/playback mode, or continuous play mode.

- = : For recording or playback only a single side.
- \Longrightarrow : To fully play or record sides A and B.
- C : To playback continuously sides A and B.

2 TIMER switch

When an optional timer is used, recording and playback can be performed at any desired time.

- **6** POWER switch
- 4 Cassette holder
- **6** MULTI MODE display
 - (1) Tape remaining time display
 - (2) MEMORY indicator
 - (3) PEAK LEVEL METER
 - 4) Recording guide indicator
 - 5 Digital peak indicator
 - (6) Tape indicator
 - (7) Digital counter
 - 8 Tape length indicator
 - 9 Reverse mode indicator
 - (10) Mechanism mode indicator
 - 11 MPX Filter indicator
 - (12) DOLBY NR mode indicator

6 INPUT LEVEL control

Adjust the recording level with this control.

1 EJECT button

Press to open the cassette holder.

PHONES jack

Connect headphones (with an impedance of 8 ohms to 1 kohm).

- **9** PHONES LEVEL control
- Tape direction indicator
- DOLBY NR switches

Set to ON for recording using the Dolby NR system or for playback using the Dolby NR system. Set to OFF when the Dolby NR system is not used.

MPX FILTER switch

The MPX filter functions when the tape is recorded using the Dolby NR system. Normally, set this switch to OFF. When an FM stereo broadcast is to be recorded using Dolby NR, set this to ON to prevent the Dolby NR circuit from malfunctioning (otherwise the sound quality could deteriorate).

BLANK SKIP switch

Press this switch to skip quickly through blank portions of more than 10 seconds on the tape when playing back the tape.

REPEAT switch

use this switch with the MEMORY button.

Fig. 4-2

(B) CD DIRECT switch and indicator

Press this to make the indicator light when recording directly from a CD player. Press this again to make the indicator go out when recording from a source connected to LINE IN (line input).

(b) BALANCE control

Adjusts the balance between the signals input via the left and right LINE IN jacks.

® RESET button

Press to reset the tape counter to "0000".

DISPLAY button

Select the mode of the digital counter. The tape counter will be indicated when the power is first switched on. Press this button to select the tape remaining time display.

1 TAPE LENGTH button

Use this button when you want to check the remaining tape time. The remaining time must be displayed in the digital counter before setting the tape length (e.g., C-60).

MEMORY button

Use this button to specify the position at which you want the tape to stop in rewind and repeat playback.

(Digital peak)

Press to call up the stored peak level or reset the memory.

Cassette operation buttons

◄ (rewind):

Press to fast wind the tape from right to left.

PLAY:

Press to start recording/playback. Press this button with either the ◀ or ▶ button for music scanning.

(fast forward):

Press to fast wind the tape from left to right.

(stop):

Press to stop the tape.

O REC/REC MUTE:

Press the PLAY button while pressing this button to start recording, and press to leave an appropriate non-recorded section.

III (pause):

Press to stop the tape temporarily. Press the PLAY button to release the pause mode.

◆ID DIRECTION:

Press to change the direction of tape travel.

5 Removal of Main Parts

(Cabinet Parts)

Top Cover

- 1) Remove the four screws on the left and right.
- 2) Remove the two screws on the back side.

■ Back Cover

Remove the six screws (1) (1) retaining the back cover.
 It is possible in this state to replace parts on the main power source P.C. Board.

Front Plate

- Remove the input level volume knob and the balance volume knob.
- 2) Remove the five screws 2 retaining the front plate on the top and bottom.

■ Front Panel Assembly

- 1) Remove the power source switch knob.
- Remove the switch side of the input change remote bar and remove the knob.
- 3) Pull the input volume remote bar inward and remove from the F. panel.
- 4) Remove the two screws 3 retaining the center chassis on the front side.
- 5) Remove the four screws 4 retaining the panel assembly on both sides.
- 6) When necessary, remove the wire processing.

■ Removal From the Front Panel Assembly Mechanism Assembly

- 1) Remove the two screws (5) retaining the upper side of the mechanism assembly from the back.
- Remove the solder for the LED lead on the leaf switch P.C. Board.
- 3) Remove the two screws (6) retaining the bottom side of the mechanism assembly.
- 4) Open the cassette door and remove.

■ Timer Switch

Release the hooks retaining the switch P.C. Board at four locations.

Headphone Jack P.C. Board

- 1) Pull out the output volume knob.
- 2) Remove the nut which is retaining the jack.
- Remove the volume bracket, push the volume shaft upward and remove from the groove.

■ Volume P.C. Board

1) Release the hooks which are retaining the balance volume P.C. Board at two locations.

■ Display, Dolby B/C NR, MPX Filter Switch P.C. Board

- 1) Remove the two nuts (7) retaining the switch.
- Release the hooks which are retaining the P.C. Board at six locations.

Fig. 5-1

Fig. 5-2

Fig. 5-3 Assembly as seen from inside.

Fig. 5-4

Switch P.C. Board Assembly

Remove hook (D) and then remove hooks (E) in five locations in the correct order starting on the (D) side.

Pressing the P.C. Board from the hole on the front panel will facilitate removal.

(Mechanism Section) Refer to disassembly figures.

Head Assembly:

- 1) Remove the head wire from the wire holder.
- 2) Make sure the head cap is protected (by covering with paper secured with tape).
- 3) Remove the two screws on the head cap side and slowly pull out the head cap. It should be possible for the shield section to move as far as the head mount assembly.

Head Mount Assembly

- 1) Remove the head return spring.
- 2) Remove the two screws (1) retaining the head mount assembly.

FM Bracket

- 1) Remove the five screws (2) and (5) retaining both sides of the FM bracket.
- 2) The bracket on the capstan motor side has a hub hook.
- 3) Removing the motor bracket will make it possible to remove the belt.

Flywheel Assembly

1) Remove the screws retaining the flywheel metal from the holes in the flywheel.

■ Disk Base Assembly

- 1) Remove the flywheel.
- 2) Remove the four screws (3) retaining the cam motor and the reel motor (on the head assembly side).
- 3) Remove the screw (4) retaining the head base.
- 4) Pulling the brake arm away from the disk arm will allow removal.

Meshing of the cam gears:

When meshing the cam gears, the M marks are meshed.

Fig. 5-9

Fig. 5-8

Fig. 5-10

6 Main Adjustments

1. Equipment and measuring instruments used for adjustments

- 1) Electronic voltmeter
- 2) Audio frequency oscillator (range: 50-20 kHz and output 0 dB with impedance of $600~\Omega$)
- 3) Attenuator (impedance; 600 Ω)
- 4) Standard tapes for REC/PB

Maxell UD1 - Normal (SF) tape

TDK SA — Chrome (SA) tape — or equivalent

JVC ME - Metal tape

 Reference tape for playback (JVC Test Tape) TMT6451 (or VTT712) (for tape speed, wow flutter adj.)

VTT644 (or VTT724) (for playback level)

VTT739 (for playback frequency response)

VTT703L (10 kHz) (for head azimuth adj.)

- 6) Resistor 600 Ω (for attenuator matching)
- 7) Distortion meter (bandpass filter)
- 8) Torque testing cassette gauge, CGT-N
- 9) Wow flutter meter
- 10) Frequency counter
- 11) M300 gauge (tape transport Adj.)

2. Mechanism adjustment proceder

Item	Adjustment	Adjusting point	Standard value	Remarks
Adjusting motor speed	 Connect a frequency counter to the LINE OUT terminals. Play back the test tape (VTT712). Adjust the semi-fixed resistor in the capstan motor until the reading of the speed meter is 3000 Hz. 	Semi fixed resistor in the motor	3000 Hz ±15 Hz	
Checking wow and flutter	Connect a wow and flutter meter to LINE OUT terminals. Play back the VTT712 test tape. Check to see if the reading of the meter is within 0.11 % (WRMS).		0.11 % (WRMS)	If the reading becomes moveing value even if confirming to the standard, a re-claim may be raised. Reparis are necessary.
Checking playback torque	Employ a torque testing cassette tape for the checking, or remove the cassette cover and use a torque gauge.		35-75 gr-cm	If the standard torque is not obtained, replace the take-up disk assembly.
Checking fast forward torque	Measure the torque in the fast forward mode in the same manner as in the above.		70 g – 200 gr-cm	If the standard torque is not obtained, perform the following. 1. Clean the capstan belt, the idler circumference, the motor pulley, the take-up reel disk circumference, the flywheel circumference, etc. 2. Replace the belt and idler.
Checking rewind torque	Measure the torque in the rewind mode in the same manner as in the above.		70 g – 200 gr-cm	If the standard torque is not obtained, clean the capstan belt, idler, motor pulley, flywheel circumference, rewinding idler circumference, left reel disk circumference, etc.

Item	Adjustment	Adjusting point	Standard value	Remarks
Adjusting Head azimuth	1. Connect an electronic voltmeter to the LINE OUT terminals 2. Playback the VTT703L test tape. 3. Adjust the head angle with the screw (FWD and REV) unitl the reading of the electronic voltmeter becomes maximum for both channels.	Screws (FWD, REV)	Maximum	FWD————————————————————————————————————

Items	Tape to be used/jig	Standard	Adjustment and checking method	Adjusting points
Tape transpsort adjustment	M300 gauge and C-90 tape	The tape should not be curled or stretched during travel. Note: Normally, the tape travel can only be adjusted at tape guide. However, when this adjustment is not sufficient, adjust the cassette guide height.	the gauge passes through the guide smoothly. Confirm it in both forward and reverse directions. Cassette guide height adjustment. (The cassette height can be changed.)	(Apply screw locking compound after adjustment.) Tape guide

3. Electrical adjustments proceder

	Item		Adjustment Methods and Verification Methods

Power Supply/Mechanism Control Parts List

 $\ensuremath{\Delta}$ parts are safety assurance parts. When replacing those parts, make sure to use the specified one.
